

AC-FAIL DETECTION CIRCUIT ACF 2624

Generic Datasheet

- Stand-alone design
- Analog circuitry
- High quality and reliability
- Made in North America

The ACF 2624 detects AC-line failure within 4ms - 6ms typical and 8msec maximum, a speed critical for minimizing required power supply hold-up time. This stand-alone circuit is suitable for AC-line monitoring, and may be designed into electrical systems for a diverse range of applications. The ACF 2624 features a built-in auto-ranging circuit which enables operation for 120Vac or 240Vac. The unit has fail-open alarm output. This alarm output is TTL compatible. The TTL level can however be overridden and increased up to 28V, by external pull-up resistors. Various mounting options are available, including DIN-rail mount and chassis-mount. These compact modules measure 2.7" x 2.3" x 2".

SPECIFICATIONS

Input Voltage

115Vac or 230Vac
47-63Hz

Detection Time

4 – 6 ms typical
8 ms max

Dimensions

2.7" x 2.3" x 2"
68.6mm x 58.4mm x 50.8mm

RoHS Compliance

(Directive 2002/95/EC)
According to requirements

Isolation

2250VDC input to chassis
4300 input to output
8mm spacing
500V output to chassis

Alarm Output

Fail open
Sink and source capacity:
1 TTL load

Input/Output Connections

Barrier-type terminal block
with 3/8" spacing

Warranty

Two years subject to application
within good engineering practice

Designed to meet EN 60950 and
corresponding UL and CSA
standards

Operating Temperature Range

-20 to 50°C

Storage Temperature

-40 to 85°C

EMI Suppression

EN 55022 Class B

Enhancements to these general specifications and customizing can be accommodated upon request. Specifications subject to change.

Designer and manufacturer of quality converters, inverters, UPS systems, complete rack mount systems and DC-input fluorescent lamp inverters since 1982. Custom or standard. Absopulse is a BABT-approved Facility.
